

Q1: 与传统软件相比, Web 应用软件在测试上有哪些不同点?

A: 不限于下面的答案:

- A symptom on the client side is not the error itself
- Almost impossible to reproduce an error outside the environment
- Many errors are due to the configuration
- Difficult to trace across the client, the server, and the network layers
- Static (configuration) and dynamic (instantaneous resource loading or time-related errors) operating environments both generate errors
- Environment plays an important role in the diagnosis of errors.

Q2: 性能测试与负载测试有何不同?

A: Stress testing is used to find the performance peak. Performance is used to test the throughput in the normal load.
