

Algorithm 2

- ◆两进程共享数据

 - flag [i] = true

表示进程 P_i 发出申请,希望进入临界区 执行

Algorithm 2 (续)

```
◆ 进程 P;
do {
      flag[i] = true;
      while (flag[j]);
            critical section
      flag [i] = false;
            remainder section
} while (1);
```

Algorithm 2 (续)

```
◆ 进程 P<sub>i</sub>
do {
       flag[j] := true;
       while (flag[i]);
       critical section
       flag [j] = false;
              remainder section
} while (1);
```

- ◆满足 Mutual Exclusion, 但不满足 Progress
- ◆为什么?
